

COBRO IMS

Client System Walkthrough

Presenter's Script — v6 (live-corrected)

You will sign in as Sarisha, and build the demo environment in front of the client: the users, the department, the products, the stock, and the requisition — one continuous example, reused by name and reference from the first page to the last.

Every navigation, click, selection, typed value and submission is written into the sentence you say. Every exact value you need to type is shown in a green INPUT DATA box immediately next to the sentence that uses it — you never need a second document.

For internal presenter use only — not for distribution to the client.

How to Use This Document

Read every plain paragraph aloud, in your own voice, and perform the action it describes as you say it. Where a green INPUT DATA box follows a paragraph, that box is what you type or select — the paragraph above it already told you what, and why.

Marker	Meaning
■ CREATE	You are about to build a new piece of data live — a user, a product, a department, a requisition. The INPUT DATA box beneath it is what you enter.
■ NAVIGATE	A spoken paragraph that explains why, and tells you which screen you're moving to, as you say it.
■ DEMONSTRATE	A spoken paragraph that explains why, and tells you what you're clicking, selecting or submitting, as you say it.
■ EXPLAIN	A spoken paragraph with no action — just talk the audience through a concept.
■ ROLE SWITCH	A spoken paragraph that explains why responsibility is moving to someone else, and tells you to sign out and sign back in, as you say it.

Live Demo Data — Master List (keep this consistent)

Every value below is created or used, in this order, and never changes once created.

ADMIN — already exists, do not create

INPUT DATA
Name Sarisha
Email sarisha@cobro.co.za
Password Your own prepared password

USERS — created live, in Part 3

INPUT DATA
Stores Clerk Lerato Dlamini · lerato.dlamini@cobro.co.za
Mechanical Team Leader Sipho Khumalo · sipho.khumalo@cobro.co.za · Area: Mechanical
Electrical Team Leader Naledi Maseko · naledi.maseko@cobro.co.za · Area: Electrical
Engineer / Requester Thabo Mokoena · thabo.mokoena@cobro.co.za · Area: Mechanical

Passwords for all four: generated by the system the moment each is created, and shown on screen.

SUPPLIER — already exists live, do not recreate

INPUT DATA
Name Natal Cement Distributors

DEPARTMENT — created live, in Part 4

INPUT DATA
Name Mechanical Workshop

PRODUCTS — created live, in Part 5

INPUT DATA

Ordinary item

Steel Trowel · SKU COB-STL-001 · ea · barcode 6009876543210 · no category
· reorder 10 / 20 · R185.00

Repair item

Concrete Pump Motor · SKU COB-REP-001 · ea · barcode 6001234567890 ·
Repair items category · reorder 2 / 4 · R2,850.00

GOODS RECEIVING DELIVERY CODES — used live, in Part 6 (re-verified, current supplier)

INPUT DATA

Steel Trowel delivery code

COBR01 | 6009876543210 | 93b63383-7335-4f3d-bfb3-4442fa58d0d5

Concrete Pump Motor delivery code

COBR01 | 6001234567890 | 93b63383-7335-4f3d-bfb3-4442fa58d0d5

Both codes use the Natal Cement Distributors supplier that already exists live, and are verified working right now: each matches its product, attaches the supplier, and leaves “Post receipt” enabled.

STORE — already exists, cannot be created

This script calls it “Main Store”; the real store code is DBN-FAC.

THE REPAIR STORY — spoken throughout, from Part 8 onward

INPUT DATA

Workshop / Department

Mechanical Workshop

Engineer

Thabo Mokoena

Repair item

Concrete Pump Motor

Quantity requested

2 (one will be used, one returned)

Pre-Demo Checklist

VERIFY BEFORE DEMO

- Sarisha's Admin login (sarisha@cobro.co.za) works.
- The demoacc@cobro.co.za Admin account is ready, 2FA enrolled and tested.
- At least one Store-type warehouse already exists (confirmed live: DBN-FAC).
- The "Repair items" product category already exists.
- The "Show costs to all roles" setting under Security is switched on.
- The two delivery codes above are typed directly into the Goods Receiving scan box during the walkthrough — nothing further to prepare.

CREATE LIVE (do NOT pre-create these)

- Four users: Lerato Dlamini, Sipho Khumalo, Naledi Maseko, Thabo Mokoena (Part 3).
- One department: Mechanical Workshop (Part 4).
- Two products: Steel Trowel, Concrete Pump Motor (Part 5).
- Stock for both, via Goods Receiving (Part 6).
- One requisition, approval, issue, use and return (Parts 8–14).

Presentation Objective

By the end of this walkthrough, the client will have watched one repair, end to end, on the completed system — from an empty environment, through a real user being created, a real product catalogued with its controlling price, real stock received, a real request raised, automatically valued, approved, issued, used and partially returned, through to the exact material cost that repair generated, reported back from real system data.

The Master Script

Read every plain paragraph aloud, in order. Every green box is exactly what you type or select at that moment.

Opening

Good morning/afternoon, and thank you for the time today. Rather than show you a finished system with data already sitting in it, I want to build today's example in front of you, from nothing.

We'll follow one repair from start to finish: a technician needing a part, the request automatically valued from your product catalogue, Stores approving and issuing it, the technician using it, and management seeing exactly what it cost.

PART 1 — LOGIN

■ NAVIGATE

I'll open the login page now, without signing in yet.

■ DEMONSTRATE

I'm signing in as our Admin user, Sarisha.

INPUT DATA

Email

sarisha@cobro.co.za

Password

Your prepared password

■ EXPLAIN

For any user with an extra layer of verification switched on, the system asks for a short code from their authenticator app immediately after their password, right here on this same screen.

PART 2 — DASHBOARD

■ NAVIGATE

Once signed in, this is the very first thing I see — the Overview.

■ EXPLAIN

This page answers one question immediately: “what do I need to know right now?”

PART 3 — SETTING UP THE PEOPLE

■ NAVIGATE

I'll move to Users now.

■ EXPLAIN

I'm going to create four accounts here, one at a time. We'll use every one of them later today.

■ CREATE

I'll create our Stores Clerk first.

INPUT DATA

Full name

Lerato Dlamini

Email

lerato.dlamini@cobro.co.za

Role

Stores Clerk

■ DEMONSTRATE

I'll click Create user now. The system generates a one-time password shown right here.

■ CREATE

Next, our Mechanical Team Leader.

INPUT DATA

Full name

Sipho Khumalo

Email

sipho.khumalo@cobro.co.za

Role

Mechanical Team Leader

Area

Mechanical

■ DEMONSTRATE

I'll click Create user.

■ CREATE

The equivalent role on the Electrical side.

INPUT DATA

Full name

Naledi Maseko

Email

naledi.maseko@cobro.co.za

Role

Electrical Team Leader

Area

Electrical

■ DEMONSTRATE

I'll click Create user.

■ CREATE

Finally, our Engineer.

INPUT DATA

Full name

Thabo Mokoena

Email

thabo.mokoena@cobro.co.za

Role

Engineer / Requester

Area

Mechanical

■ DEMONSTRATE

I'll click Create user.

■ EXPLAIN

Behind the scenes, creating Thabo has also just created his own personal stock location, automatically — his station.

PART 4 — SETTING UP THE DEPARTMENT

■ NAVIGATE

I'll move to Departments and create the one we'll use today.

■ CREATE

I'm creating a department called Mechanical Workshop.

INPUT DATA

Name

Mechanical Workshop

■ DEMONSTRATE

I'll click Add department now.

PART 5 — SETTING UP THE PRODUCTS

■ NAVIGATE

Now I'll move to the Product Catalogue.

■ EXPLAIN

I'm going to create two products here: one ordinary stock item, and one repair item.

■ CREATE

First, the ordinary item.

INPUT DATA

SKU

COB-STL-001

Name

Steel Trowel

Unit of measure

ea

Barcode

6009876543210

Category

— none —

Reorder point / qty

10 / 20

Unit price (cost)

185.00

■ DEMONSTRATE

I'll click Add product.

■ CREATE

Now the repair item.

INPUT DATA

SKU

COB-REP-001

Name

Concrete Pump Motor

Unit of measure

ea

Barcode

6001234567890

Category

Repair items

Reorder point / qty

2 / 4

Unit price (cost)

2850.00

■ DEMONSTRATE

I'll click Add product.

■ EXPLAIN

Notice this item is tagged “Repair items”, and the Steel Trowel isn’t. That tag follows this product wherever it appears: receiving, the requisition, transfers, scan results, and the Repair Cost Report I’ll show you later. An Engineering user requesting an item tagged Repair items is what establishes a repair transaction — nothing further needs to be typed.

■ EXPLAIN

The cost I just typed, R2,850.00, now lives centrally on the product record, and only an Admin account can change it. Every price anywhere else in the system is drawn from this one figure, automatically.

PART 6 — RECEIVING STOCK

■ NAVIGATE

Both products exist now, but neither has any actual stock yet. I’ll move to Goods Receiving.

■ EXPLAIN

This screen starts with nothing but a barcode scan box, on purpose — everything else appears the moment something is actually scanned.

LIVE DEMO INPUT — GOODS RECEIVING (verified live, current supplier)

Field	Steel Trowel	Concrete Pump Motor
Code to type into the scan box	COBRO1 6009876543210 93b63383-7335-4f3d-bfb3-4442fa58d0d5	COBRO1 6001234567890 93b63383-7335-4f3d-bfb3-4442fa58d0d5
Number of times to enter it	3	5
Supplier / Location shown	Natal Cement Distributors / Main Store	Same
Quantity received shows	Increases by 1 each time the code is entered	Same
Unit cost field	Open, editable box (Admin only) — type 185.00	Open, editable box (Admin only) — type 2850.00
Final action	Post receipt	Post receipt

■ DEMONSTRATE

I’ll type the Steel Trowel’s delivery code into the scan box now, and press Match.

INPUT DATA

Delivery code to enter

COBR01 | 6009876543210 | 93b63383 - 7335 - 4f3d - bfb3 - 4442fa58d0d5

■ **EXPLAIN**

That code is exactly what a real supplier delivery label carries — the product's own barcode, plus who it's from, combined into one scannable code.

■ **EXPLAIN**

The moment that matched, the rest of the form appeared: Steel Trowel, confirmed as coming from Natal Cement Distributors, going into Main Store, and a quantity that's a running count.

■ **DEMONSTRATE**

I'll enter that same code twice more, to bring the count up to three units received.

■ **EXPLAIN**

Because I'm signed in as Admin, the cost field is an open box I type into myself.

INPUT DATA

Unit cost (R)

185.00

■ **DEMONSTRATE**

I'll click Post receipt now.

■ **EXPLAIN**

That's posted a real stock movement.

■ **CREATE**

Now the repair item.

INPUT DATA

Delivery code to enter

COBR01 | 6001234567890 | 93b63383 - 7335 - 4f3d - bfb3 - 4442fa58d0d5

■ DEMONSTRATE

I'll enter that same code five times in total, to bring in five units, since we're going to need two of them for the request coming up shortly.

■ EXPLAIN

I'll type the cost myself again, R2,850.00.

INPUT DATA

Unit cost (R)
2850.00

■ DEMONSTRATE

I'll click Post receipt.

■ EXPLAIN

One thing worth pointing out: I could type that cost myself because I'm signed in as Admin. If I were signed in as Lerato, our Stores Clerk, that field would show the catalogue cost automatically, read-only. That governance is enforced by the system itself, not just hidden in the screen.

■ NAVIGATE

Let's confirm what's changed — I'll go to the Overview's stock-by-location table.

■ DEMONSTRATE

Here, both products now show real stock on hand — three Steel Trowels, five Concrete Pump Motors.

PART 7 — STOCK LOCATIONS

■ EXPLAIN

Broadly, stock lives in one of two kinds of place: your Stores, or an Engineer's own personal station.

■ DEMONSTRATE

I'll switch this view to Station now, and pick Thabo's station — created automatically the moment we created his account.

PART 8 — RAISING THE REQUEST, AS THE ENGINEER

■ ROLE SWITCH

I'm going to sign out of Sarisha's account and sign in as Thabo.

INPUT DATA

Email

thabo.mokoena@cobro.co.za

Password

The one-time password noted at his creation

■ EXPLAIN

This is the Engineer's view of the same system — scoped to his own stock, and the ability to request more.

■ NAVIGATE

I'll move to Requisitions now.

■ CREATE

I'm creating a new requisition for the Concrete Pump Motor.

INPUT DATA

Department

Mechanical Workshop

Store

Main Store

Product

Concrete Pump Motor

Quantity

2

■ EXPLAIN

Watch the Unit value field the instant I select Concrete Pump Motor: it fills in on its own, straight from the catalogue record — R2,850.00. It's shown as plain text, not a box, because Thabo has no way to change it. The figure is pulled directly from the Product Catalogue and cannot be overridden, from this screen or by any other means.

INPUT DATA

Unit value (R)

2,850.00 (automatic, read-only)

■ DEMONSTRATE

I'll click Create Requisition now.

PART 9 — WHAT STORES SEES

■ ROLE SWITCH

I'll sign out of Thabo's account and sign in as Lerato.

INPUT DATA

Email

lerato.dlamini@cobro.co.za

Password

The one-time password noted at her creation

■ NAVIGATE

I'll navigate to Requisitions.

■ EXPLAIN

This is exactly what Lerato sees: department, product, store, quantity, and value — the same catalogue-derived R2,850.00.

PART 10 — APPROVAL, AND RESERVED STOCK

■ DEMONSTRATE

I'm going to approve this request now, as Lerato.

■ EXPLAIN

The stock hasn't physically gone anywhere yet — it's now set aside for this specific request.

■ NAVIGATE

I'll move to the stock-by-location view.

■ DEMONSTRATE

The Concrete Pump Motor shows a reserved quantity of 2 alongside the on-hand quantity of 5.

PART 11 — ISSUING THE STOCK

■ EXPLAIN

The next step actually changes the physical position: dispatching, or issuing. I'll show you the Engineer accepting it themselves.

PART 12 — THE ENGINEER RECEIVES IT

■ ROLE SWITCH

I'll sign back in as Thabo.

INPUT DATA

Email

thabo.mokoena@cobro.co.za

Password

His own password, set at first login

■ NAVIGATE

I'll navigate to Requisitions.

■ DEMONSTRATE

I'm going to click Accept on the approved requisition now.

■ EXPLAIN

Both units left Main Store and landed on Thabo's own personal station.

■ NAVIGATE

I'll go to his Overview.

■ DEMONSTRATE

Here are our two Concrete Pump Motors, sitting on his station, ready for him to use.

PART 13 — USING THE MATERIAL

■ NAVIGATE

I'll move now to the barcode scanning screen.

■ DEMONSTRATE

I'll switch to "Use" mode and scan or manually enter the barcode for the Concrete Pump Motor, 6001234567890. If entering it manually, I'll press Enter to submit it.

INPUT DATA

Mode
Use
Barcode
6001234567890
Press
Enter (or Match, if entering by hand)
Quantity
1

■ EXPLAIN

That reduced the stock on Thabo's own station by exactly one unit. This is the exact transaction the Repair Cost Report is built from.

PART 14 — RETURNING WHAT WASN'T NEEDED

■ NAVIGATE

I'll go to the Overview's stock-by-location table.

■ DEMONSTRATE

I'm going to click "Return to Stores" on it, confirm a quantity of 1, and submit.

INPUT DATA

Quantity to return

1

■ EXPLAIN

That stock is now on its way back to Stores, using the same in-transit process a transfer uses.

PART 15 — ENGINEER ACCOUNTABILITY: USE-OR-RETURN REMINDERS

■ DEMONSTRATE

I'll click on the notification bell here, in Thabo's own view.

■ EXPLAIN

If stock has been sitting on an Engineer's own station, untouched, for more than one day, it shows up right here as a reminder.

PART 16 — CHECKING THE TRAIL

■ ROLE SWITCH

I'll switch back to Sarisha's Admin account.

■ NAVIGATE

I'll move to the Audit log.

■ DEMONSTRATE

Here you can see a running record of every action we've performed today, each attributed to the actual account that performed it.

PART 17 — THE REPAIR COST REPORT

■ NAVIGATE

I'll move to Dashboards & reports, to the Repair item cost report.

■ EXPLAIN

This report answers the management question directly: what has each repair item actually cost, based on what was genuinely issued and used?

■ DEMONSTRATE

Here's the Concrete Pump Motor row: quantity issued, quantity used, the catalogue unit value of R2,850.00, and the total material cost — calculated live as quantity used multiplied by the catalogue value.

■ EXPLAIN

Every number on this row traces back to something we did today: the catalogue price from Part 5, and the use recorded in Part 13.

PART 18 — STOCK VALUATION AND OTHER REPORTS

■ EXPLAIN

Stock Valuation directly reflects everything we've done today.

■ DEMONSTRATE

I'll point to the value shown for the Concrete Pump Motor.

■ EXPLAIN

Low stock and Dormant stock are worth a quick mention too.

PART 19 — ROLES AND PERMISSIONS, ALL TOGETHER

■ NAVIGATE

I'll open Users again.

■ EXPLAIN

Lerato handled receiving, approving, issuing, but cannot raise a write-off. Sipho and Naledi get oversight scoped to their own area. Thabo could raise, accept, use and return stock, but has no access to the catalogue or receiving.

■ EXPLAIN

A more thorough walkthrough of each role, including supporting videos, will be sent through.

Closing

Everything you've seen today was built in front of you, from nothing, in this one session.

Cobro IMS follows a repair from the moment stock arrives, through a request that is automatically priced from your own product catalogue and cannot be altered by whoever raises it, through approval, issue, use and return, all the way to a Repair Cost Report calculated live from those same transactions.

I'm happy to answer any questions, or go back into any part of this in more depth.
